ABOUT ME

I'm a multidisciplinary researcher and designer working across urban development, design research and visual communication.
My work combines spatial analysis, participatory research and creative design to explore how places function and how people experience them. I enjoy translating complex questions and research findings into clear insights, engaging visuals and practical concepts that others can understand and use.
Curious and collaborative by nature, I enjoy working across disciplines, connecting different perspectives and moving between analytical thinking and hands-on creative work.

EDUCATION

- Bachelor in Engineering, Design & Innovation, direction Product Design at the University of Applied Sciences Amsterdam (2010-2015)
- Master in Metropolitan Analysis Design & Engineering at the Technical Universtity of Delft and University of Wageningen (2024-2026)

EXPERIENCE

I have professional experience in urban development research, design and consultancy, focusing on sustainable cities and creative, human-centred solutions.
